Affidavit and Notice to Contractors on Retro-Fit Windows
Effective September 1, 2006

Window Bucks must extend beyond the entire face of the window frame such that the entire frame is supported (2004 FBC 1714.5.4.1). Approved interpretation at the February 9, 2006 ***Board of Rules and Appeals*** meeting.

Exception: A Florida Professional Engineer or Architect may modify the buck or fasteners as specified in a Notice of Acceptance. Such modification must be documented with a signed and sealed letter or drawing.

Because a window buck inspection is not required it is the responsibility of the contractor to make sure that the proper buck and buck fasteners are utilized, therefore the following affidavit must be submitted, signed, and notarized by the Contractor or Owner of a homeowner's permit.

Check one of the following:

- ☐ Existing beveled buck to be changed to a square edge buck that extends beyond the face of the window frame (anchored per NOA). **Will require photo's of new buck installation for final.**
- ☐ Existing buck meets the requirement of extending beyond the face of the windows frame (anchored per NOA). **Provide detailed drawings of such – also will require photo's for Final.**
- ☐ Interior walls are constructed of plaster (not drywall). This is an acceptable alternate that will not require you to chip out the plaster and change to a wider window buck. Photos of such required at final inspection.
- ☐ Provide a letter from a Florida Registered Architect or engineer on alternate testing or design with calculations that provide a buck system that will allow the window to perform as originally tested by the manufacturer.

Additional Note: Window frames that have snap-on type covers that hide the fasteners are to be left off until the window attachments have been inspected and approved. Mullion attachment needs inspection or you may provide photos.
