## SUBTERRANEAN TERMITE SOIL PRETREATMENTS

Following consultations with the Florida Department of Agriculture & Consumer Services, Bureau of Entomology and Pest Control, the City of Tamarac Building Department requires that all preconstruction soil treatments to prevent subterranean termites be made in full compliance with the Federal E.P.A. label.

Specifically, local soil conditions do not prevent applications at the full gallonage rates published on termiticide labels. Reduced volumes of water with increased concentrations of chemical are not warranted in this area, thus, do not comply with the label and, therefore, will not be approved as meeting the requirements of Section 1816 of the 2004 Florida Building Code.
