

Multi Purpose Center Building Envelope (Kalwall) Project

This project consists of designing the replacement of the existing Kalwall translucent wall panels with Sure-Board Wall Systems and the roof panels with a Standing Seam Metal Roof System. An agreement with Corzo Castella Carballo Thompson Salman, PA (C3TS) for said design has been executed. Following the execution of this agreement, it was determined that additional architectural enhancements were needed to improve upon the ascetics of this project. The proposed enhancements were presented to the Commission, with a vote of interest to move forward with design and construction. Staff is currently working with the consultant to finalize the RFP package, with competitive bidding scheduled for October 2011.
